We understand life sciences

NNIT is one of Europe's leading consultancies in the development, validation, implementation, and operation of IT for the life sciences industry. We create value for our clients by treating their IT as if it were our own and always meet the industry's strictest requirements for quality. For over 15 years, we have applied the latest advances in technology to make our clients' software, business processes and communication more effective. NNIT employs more than 1,400 people and in 2009, our turnover was €213 million.

NNIT 010

To even out the uphill struggle of QM and QA peak loads simply read on ...

The easiest way to overcome QM and QA resource bottlenecks

If you work with Quality Management and Quality Assurance in life sciences, you are probably all too aware of the fact that managing peak loads is not for the faint hearted. Even the most talented managers can find it a balancing act to ensure that highly skilled resources are available when and where needed. And when resource bottlenecks occur, they have to be managed quickly and efficiently without losing focus on the overall goal of QM and QA processes that meet regulatory requirements and live up to best practice.

At NNIT we have worked in this field for many years and understand the specific challenges it presents to QA managers. That is why we have designed a range of modular management services to address specific processes in two main areas: QMS governance, and QA and validation support for IT projects and operations. Our specialist teams are always up to date with best practice and current regulatory requirements and provide services tailored to support your compliance efforts within your QMS framework. In short, we ensure the quality you need when it is most needed.
